

## Tax Equity

At Troutman Sanders, our tax attorneys regularly represent companies that develop, acquire and invest in energy and renewable-energy projects, energy storage facilities, and electric vehicle charging and other alternative-fuel refueling facilities. Our client roster includes facilities dealing in wind, solar, geothermal, waste-to-energy, biomass, hydroelectric and other renewable energy generation facilities. We also represent alternative-fuel producers, blenders and sellers.

We are familiar with current tax equity structures, with an emphasis on sale-leaseback and partnership-flip transactions, and advise on utility, commercial and residential projects. Our attorneys also structure domestic and cross-border energy and project finance transactions such as the financing of power plants, aircraft, rail equipment and infrastructure assets.
