AI: Impact and Use in Background Screening – Crossover Episode With the Regulatory Oversight Podcast

FCRA Focus Podcast

SPEAKERS

David M. Gettings | Stephen C. Piepgrass | Ronald Raether, Jr.

Join us for the final episode in a special five-part series covering artificial intelligence (AI). Many companies use machine learning algorithms and AI to assist with employment decisions and tenant screening. In our final episode, Stephen Piepgrass and colleagues Ron Raether and Dave Gettings examine the use and impact of AI in background screening, including the potential risks companies may face with increased reliance on AI.

Our panel also explores the increased focus on AI by various regulators and state attorneys general, and offer some best practices to consider when developing or adopting machine learning models into business processes.

We hope you enjoyed listening and found value in this episode. For the complete series on AI, please visit the *Regulatory Oversight* podcast on our website for all previous AI installments.
