Happy New Year, and welcome to 2024! With all the retrospectives, outlooks, and watch lists flying around this time of year, we’ve compiled a review that cuts to the chase on the air regulations that made headlines in 2023, and those likely to do so again this year. The Environmental Protection Agency (EPA) has set perhaps its most ambitious agenda ever, and the courts are packed with cases that could fundamentally change the world of air quality regulations. The whirlwind will launch almost immediately as EPA quickens its pace in the hope of avoiding clawbacks, should a new party gain control of the White House next year. We hope you find this brief summary helpful in rebooting for a year that is sure to be remarkable.
