---

In today's rapidly evolving digital landscape, artificial intelligence is transforming how businesses operate, bringing both opportunities and challenges. One challenge is the rapidly emerging patchwork of state and local AI laws and regulations. Last year alone, state lawmakers introduced over 500 bills on various AI topics and issues. In this webinar, we will bring order to the chaos and provide attendees with an overview of the existing AI laws and regulations. To drive understanding and comprehension, we will use a unique topic and use-case based approach breaking the laws down across topics, including consumer disclosure obligations, risk assessment requirements, pricing algorithms, employee-specific issues, provenance, and frontier model laws. Attendees will walk away not only with an understanding of the current state and local legal requirements governing AI but also with a framework to understand and digest new laws enacted moving forward.
