

eMerge Expands Its Attorney-Directed AI Offerings With Several Advanced Tools Included at No Charge

WRITTEN BY

Alison A. Grounds | Jason Lichter | Jim Calvert

KEY POINTS

- eMerge is launching a *Pre-Litigation AI Factfinder Package*, making AI fact development tools, including Relativity aiR for Case Strategy, Relativity aiR Assist, Opus2 AI, Fileread, and eMerge Flywheel, freely available to analyze up to 25 GB of data in new Relativity workspaces for 60 days, enabling more sophisticated early case assessment.
- eMerge is also adding an *AI Fact Development AI Package*, including access to these same tools, at no additional charge on any matters hosted with eMerge.
- These AI tools were purpose-built for litigation, enabling legal teams to quickly identify key facts, surface relevant themes, assess the viability of potential legal arguments, and develop a stronger command of the record — supporting claims and defense development, timeline building, deposition preparation, motions practice, and trial practice.
- eMerge's attorneys and technologists can consult on defensible use cases, prompts, workflows, and validation protocols for these AI tools.
- Contact eMerge at consult@troutmanemerge.com to optimize your use of AI in litigation matters.

We are pleased to announce that [eMerge](#) has significantly expanded its Attorney-Directed AI (ADAI) toolkit and now offers two key packages to provide an information advantage in litigation.

First, to promote more informed decision-making before the onset of litigation, eMerge is offering a new Pre-Litigation AI Factfinder Package, enabling clients and counsel to investigate the viability of potential claims and defenses with the power of AI as soon as a threat or dispute arises. This package gives case teams two full months to analyze 25 GB of data — tens of thousands of emails, chats, and documents — using our AI fact-finding tools without incurring any technical charges.

Next, for active matters, eMerge is including its robust AI Fact Development Package at no additional cost for data hosted in eMerge workspaces.

eMerge's AI Factfinder and Fact Development Packages both include Relativity aiR for Case Strategy, Relativity aiR Assist, Opus2 AI, Fileread, and eMerge's award-winning Flywheel application. These purpose-built AI solutions allow insights into the entire factual record, spanning documents produced, depositions taken, and exhibits entered, plus attorney work product, notes, and issue codes, offering a complete picture powered by Attorney-Directed AI.

eMerge can help your team leverage advanced generative and machine learning-based AI capabilities designed specifically to support case analysis, fact development, and litigation strategy. Rather than treating AI as a separate add-on, we integrate these ADAI tools directly into our RelativityOne-based discovery workflow, helping your team move swiftly from document collection to actionable case insights.

aiR for Case Strategy enables legal teams to quickly identify key facts, understand important people and events, evaluate potentially relevant themes, and develop a stronger command of the record.

aiR Assist and Fileread are interactive, agentic AI assistants for interrogating large document sets using natural language, exploring relationships between people, events, and entities while assessing and refining case insights and narratives.

eMerge Flywheel is a Relativity Innovation Award-winning tool for extracting key document information — imposing structure on large, unstructured document dumps — while simultaneously summarizing, classifying, and prioritizing the documents within.

Opus2 AI generates case chronologies, witness outlines, and deposition digests complete with sentiment analysis.

The value to your team is practical and immediate:

- Accelerate early case assessment by using AI to identify critical facts and issues sooner.
- Enhance deposition and witness preparation by quickly surfacing key documents, themes, and inconsistencies.
- Improve case organization by developing timelines, issue summaries, and fact patterns directly from the hosted record.
- Reduce attorney burden by allowing eMerge to configure and orchestrate the AI toolkit within the market-leading RelativityOne environment.

These new eMerge offerings are backstopped by professionals who understand both the technology and the litigation context. Our team will work with you to identify appropriate use cases, structure effective prompts and workflows, validate outputs, and ensure that AI-generated insights accelerate your team's legal analysis.

eMerge's attorney-directed Pre-Litigation AI Factfinder and AI Fact Development Packages offer clients and counsel a meaningful advantage in litigation, empowering them to work faster, think more strategically, and extract greater value from the data managed by eMerge.

TROUTMAN EMERGE

Troutman eMerge offers clients integrated legal, technology, and AI-enhanced services to address complex data-driven problems in litigation, transactional and compliance matters, government investigations, and information governance initiatives. eMerge's attorneys have received recognition from leading industry authorities, including *Chambers USA* and *Legal 500*.
