---

**February 10 – 12, 2025**

Gene Fishel will be speaking on the panel, “Generative AI in the Enterprise: Managing Risks & Insurance Implications,” at the upcoming NetDiligence Cyber Risk Summit on February 11 at 2:30 p.m.

Generative AI tools like Co-Pilot, Claude, ChatGPT, and Otter.ai are reshaping enterprise operations but also introduce significant risks related to data privacy, security, and compliance. This session will focus on how enterprises can safely implement these tools while addressing underwriting and incident response challenges. Special emphasis will be placed on privacy-centric information governance and data classification as foundational practices to mitigate risk. Attendees will gain actionable insights for navigating the intersection of innovation, risk management, and cyber insurance.
