

Mapping Compliance: A 50-State Solution

A global insurance company needed a better way to monitor the statuses and approvals of their reciprocal reinsurer filings across the United States. The client wanted a solution that would allow them to visualize these statuses on a map, facilitating easy comparison between states and tracking changes over time.

Our Approach

We created a client collaboration site featuring an interactive 50-state survey map. This map is designed to track and display the statuses and approvals for each state's reciprocal reinsurer filings. The interactive nature of the map enables the client to seamlessly compare statuses between states and across different years, providing a comprehensive view of their filings.

The Outcome

The platform is continuously updated, ensuring the client receives the most current information in an easily digestible format. The client now benefits from seamless access to updated maps for its license compliance needs, enhancing its operational efficiency and decision-making processes.
