Tuesday, December 12 • 12:00 – 1:00 p.m. ET

Join us for an engaging webinar, sponsored by Troutman Pepper's Generative AI Task Force, where we delve into the real-world application of artificial intelligence (AI), including generative AI, in health care and life sciences. Our esteemed panel, comprised of industry leaders, will share their journey of implementing generative AI, focusing on the creation and management of AI use policies. Discover how these pioneers are navigating the complex and evolving regulatory environment, balancing the risks and benefits of AI, and developing quality control measures.

Our panelists will also shed light on the critical role of legal departments and other key stakeholders in adapting to the evolving regulatory and legal landscape. They will emphasize the importance of clear AI use policies, covering aspects such as patient data privacy, ethical use, and regulatory compliance. This webinar is a must-attend for health care professionals, pharmaceutical and medical device innovators, technologists, or anyone interested in the intersection of AI and health care and life sciences.
