Navigating the New Data Frontier: Information Governance and eDiscovery for Microsoft Teams and Copilot

Zoom

SPEAKERS

[Jason Lichter](#) | [Jennifer Shea Knox](#) | [Antonio S. Avant](#)

Please join us as we explore how rapidly evolving collaboration and AI tools are reshaping risk, compliance, and discovery strategies. As organizations increasingly rely on Microsoft Teams and Copilot, legal, compliance, and IT professionals are grappling with new categories of data, complex ownership models, and evolving expectations from courts and regulators. We will offer practical insights to help you align your information governance and eDiscovery programs with this new reality.

Topics will include:

- Recent developments in discovery case law related to AI and modern data sources, and what they signal for future disputes and regulatory scrutiny.
- Real-world anecdotes about eDiscovery requests involving Teams and Copilot data, including emerging patterns and pain points.
- Where the data really lives – a high-level overview of how Microsoft Teams data is stored, and how Copilot in its many iterations creates net new and potentially discoverable content.
- Implications for information governance – practical guidance on what to retain, what to defensibly delete, and how to think about Teams and Copilot policies and controls.
- Implications for eDiscovery – how concepts of ownership versus access play out in Teams and Copilot, and what that means for scoping, collecting, and reviewing data.
