# Tips for Smaller Health Systems Starting Out with AI

## HIMSSCast

### SPEAKERS

[Brent T. Hoard](#)

---

There are all sorts of stories today about massive health systems with big names, big development teams and deep pockets innovating with artificial intelligence in health care. These are the players driving progress with this explosive technology.

But what about smaller hospitals and health systems that don't have the deep benches or deep pockets? How can they dive into the AI pool and achieve positive administrative and clinical results?

On this week's *HIMSSCast*, the subject is how smaller health systems can join the health care AI revolution, and where they should start. Our guest is well-versed in health care AI: Brent T. Hoard, a partner at Troutman Pepper, a national law firm with more than 1,100 attorneys located in 23 U.S. cities. It has depth across several industry sectors including health care.

Hoard offers plenty of advice to smaller health care players on the importance of AI and where to start work.
